

Please review the following screen changes that have been applied to the INSYST System effective Wednesday, April 25, 2007.

If you have any questions, please call the Support Desk at 510.567.8181.

### **SCREEN CHANGES**

1. Indirect Service Entry screen – it now allows entry of 24:00 for time duration. Previously 23:59 was the maximum.
2. Episode Closing(MHS) – SA Dependence is now required.
3. Episode One-shot(MHS) – SA Dependence and Trauma are now required fields. Also, the screen gets default EBP\_SS values, if any, from Provider\_Master and Provider\_Balances, and write them into Direct\_Services. We also widened the Past GAF field to be 3 characters long.
4. Episode Opening/Closing/Maintenance(MHS) - Added validation - when SA Dependence(issue) is not 'Y', then SA Dependence Diagnosis must be either blank or all zero's. Also, added validation such that Axis I and Supplemental Axis I must be different. Axis II can not be the same as Supplemental Axis II. Another change was to widen the Past GAF field to 3 characters.
5. Multi-Service Entry screen - Changed Treatment Location from required to non-required so that users won't need to enter such a code in the blank lines.
6. CSI Periodic Screen - Allow users with Client update authorization (changes\_ok = "Y") to enter Periodic Insert screen.
7. Provider Master Maintenance screen – Added two new fields: Legal Entity NPI (National Provider ID) and Facility NPI for data entry.
8. Customer Form Setting (County Master maintenance) – Added a new field called "County NPI" for data entry.
9. BMENU MHS-CSI screen – Added two new selections for auto-creating initial and final CSI Periodic records.
10. Single Service Entry – In some cases the screen kept "EBP SS 1" value from the previous entry and displayed it in the current service entry screen. This bug is fixed. The screen has also been enhanced to display default value(s) of EBP SS 2 and EBP SS 3 from the Provider Balances record, if any, when confirming the entry is OK.
11. Claim Location Maintenance – Added Treatment Location and Claim Procedure Code Type as part of the record selection criteria.
12. Various screens – An error "Transaction exceeded limit 1" has been identified and fixed. This error was caused by a user first using the Client maintenance screen, and then moving on to another screen.
