 Effective for dates of service on or after October 1, 2019
 Changes are highlighted - see color key at end of list

Effective 10/1/19 Outpatient, PES, and CSU SMHS providers can only claim for treatment of diagnoses on the ACBH list. Crossed out diagnoses are not allowed. Always use the ICD-10 code.

Instructions: The left column is the full *DHCS Outpatient Included List* (with a few additional Dx indicated by "superscript²") from BHIN 20-043. Due to asynchronous updates of ICD-10 and DSM-5, not all ICD-10 codes on the DHCS list are allowed by ACBH. Included diagnoses in the DSM-5 must be used first (as indicated). For included DHCS ICD-10 diagnoses where there are no viable DSM-5 diagnoses to provide criteria, the indicated DSM-IV-TR criteria may be used. For these diagnoses, always use the ICD-10 code and name in the medical record; do not use DSM-IV-TR names or codes. Diagnoses are repeated when there are multiple potential crosswalked diagnoses or different diagnoses with the same code. Nothing in this crosswalk supersedes DSM diagnostic criteria.

Specifiers: DSM diagnoses have uncoded specifiers that refine diagnoses. Clients' medical record must include the ICD-10 code, DSM-5 (or if using DSM-IV-TR criteria, the ICD-10 name), and all relevant specifiers. A few specifiers are included below to indicate accurate crosswalked diagnoses; however this is not an exhaustive list.
